

**National Interagency Coordination Center
Incident Management Situation Report
Friday, December 6, 2019 – 0800 MT
National Preparedness Level 1**

National Fire Activity (November 29 – December 5, 2019)

Initial attack activity:	Light (244 new fires)
New large incidents:	5
Large fires contained:	3
Uncontained large fires:***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there is 0 large fire being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires: 195
 New large incidents: 4
 Uncontained large fires: 3

* **Matthews**, Texas A&M Forest Service. Sixteen miles southeast of Haskell, TX. Brush and short grass. Moderate fire behavior.

* **One Horse**, Anadarko Agency, BIA. Two miles northeast of Carnegie, OK. Timber and tall grass. Active fire behavior. Structures threatened.

Highway 50, Oklahoma DOF. Mooreland, OK. Brush and short grass. No new information.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: A strong, cold, large low pressure area off the West Coast will continue to feed areas of snow and rain on shore, over the mountains, and across the Great Basin as it slowly begins to work its way onto the coast and inland through the weekend. Areas that had seen substantial precipitation deficits will begin to erase some of them as the passing storm systems continue to erase previous shortfalls. As it approaches the Continental Divide early in the week, it will weaken and fall apart. However, a lingering northerly flow will keep temperatures below average. Model data suggests that an Arctic Cold Front could drop south into the northern Great Plains mid-week and push temperatures down further. In the East, warm and dry conditions are expected as high pressure settles in over the region during the first half of the outlook period. However, big changes may be in store as cold air moves southeast from the Great Plains behind a passing cold front around mid-week.

Nomex®

Firefighter Health & First Aid

Nomex® is the brand name for a **heat and flame-resistant** textile made by the DuPont chemical company and first marketed in 1967. Today, more than three million firefighters and aviation personnel around the world are protected by structure fire turnout gear, wildland fire PPE, and flight suits and jackets made of Nomex®.

Nomex® IS NOT flame-proof. It burns when you hold a flame to it, but stops burning once the heat source is removed. The thick woven structure of synthetic fibers is a very poor conductor of heat. When exposed to heat, the fibers expand closing the spaces between them insulating the wearer. But to work correctly, Nomex® needs care.

Dirty Nomex®

- Wash Nomex® like normal laundry, but always include a rinse cycle that adequately removes soaps and detergents.
- Nomex® garments should never be subjected to strong oxidizing agents such as peroxides or bleaches. These harm the physical strength of the fabric.
- Tumble-dry and remove while slightly damp. Over-drying damages the fabric.

Poison Oak/Ivy/Sumac on Nomex® - MTDC researched the laundering of Nomex® firefighting clothing that has been contaminated with urushiol oil (what causes the rash) from poison oak/ivy/sumac exposure.

- MTDC recommends that fire clothing contaminated with urushiol oil be cleaned following normal Nomex® laundering procedures, with a degreaser such as a detergent or laundry soap, and as soon as possible.
- Extra care should be exercised when handling the contaminated clothing and should be kept separate from unaffected clothing and equipment.
- Put the affected clothing in a marked bag if you are giving it to someone else to wash. Before handling the affected clothing, apply a skin-barrier product such as Ivy Block or Technu®.

Fuel Soaked Nomex® - Flammable contaminants will reduce the thermal performance of any flame-resistant garment including Nomex®.

- Proper and periodic cleaning is essential to maintain thermal protective performance.

Action Item – Nomex® is not effective if it is excessively dirty, fuel-soaked, or has holes. Does your Nomex® need to be washed, repaired or replaced?
